What to Submit for the Assignment

- We have created 2 links for Assignment-2 submission
- An sql file (use the template provided) and a word/pdf document with snapshots of your code execution (a sample has been provided)
- You can submit multiple times up until the deadline (so get an early version in just in case)
- You need to rename the files using this format (e.g. StudentName_StudentID).

An sql template file has been provided for you. Please download this file and under each of the comment, add your answers to queries to the right places. Assumptions: If you have any assumptions, please list them down in the last page of the SQL file
Please note that your tutor will run the sql file. If you were to change the names of the tables/data, there will be a penalty for that. Also, order of tables have to be correct when you add them to the SQL file.

A note about the submission deadline:
The submission deadline is a deadline, not a goal! You will have other assignments due around the same time... and this is not an assignment you will be able to complete at the last minute!

Marking
Please note that there will be partial marks for each of the queries. Marks for each of the tasks have been provided next to it.
